

ADRIANO ZOINO

Mobile Fleet Incident & Support Specialist | Enterprise Fleet & Device Management Operations

Ringwood, NJ | 201-660-4502 | adriano.zoino1@outlook.com | Portfolio: [View Portfolio Here](#)

SUMMARY

Technical escalation point and SME for enterprise device fleets of 150,000+ Android and iOS endpoints across airline, healthcare, and field operations. Leads incident response and cross-vendor coordination (Apple, Zscaler, Omnisia) for mission-critical, SLA-bound outages, and builds the compliance reporting and monitoring that surfaces recurring issues before they escalate. Led the end-to-end migration of enterprise MDM infrastructure from on-premises to cloud, including custom Kotlin and C#/Xamarin field applications built to reduce migration downtime and failure points. Combines hands-on technical depth (EMDK, device lifecycle, Zero Trust access) with the communication and vendor management needed to keep stakeholders aligned during high-severity issues.

TECHNICAL SKILLS

MDM & Fleet Operations: Workspace ONE UEM (Omnissa), Apple Business Manager, Zebra StageNow / EMDK, Device Lifecycle Management, MDM Cloud Migration, Zero Trust Access Control

Development: Kotlin, C# / Xamarin, Android App Development, EMDK, PowerShell, HTML, MySQL

Cloud & Identity: Microsoft Azure, Microsoft Entra ID, AWS

Operations & Support: Incident Management, ServiceNow, Vendor Management, Remote Device Support, SOP & Technical Documentation

Platforms: Android, iOS, Windows, Linux, macOS

PROFESSIONAL EXPERIENCE

Senior Systems Programming Analyst — NTT Data (rebadged from UPS), Mahwah, NJ 06/2024 – Present

Employed by UPS from 06/2024 to 07/2025; rebadged to NTT Data effective 08/01/2025, continuing in the same role, team, and responsibilities without interruption.

- Respond to production outages across airline, healthcare, and ground operations device fleets as primary on-call contact, diagnosing root cause, building and executing the resolution plan, and reporting status through resolution and post-incident review.
- Manage vendor relationships and case escalation with core platform partners including Omnisia, Apple, and Zebra, and coordinate as needed with cellular carriers such as Verizon, AT&T, T-Mobile, and Helix, translating field-reported issues into actionable vendor cases and driving them through to resolution.
- Manage OS and application version compliance across iOS and Android fleets, producing monthly reports for business and information security stakeholders and taking corrective action, from remediation to removal, based on the nature of the compliance issue.
- Support a portfolio of approximately 40 projects and device fleets, executing pre-deployment validation testing on configurations, settings, and feature enhancements using controlled device samples to confirm operational readiness before broader release.
- Architected and led an enterprise-wide migration of 150,000+ devices actively in live production use to Workspace ONE UEM, transitioning from an on-premises platform to the cloud across U.S. operations and international sites throughout Europe, Asia, and South America with minimal disruption to field users.
- Built internal Android migration applications in Kotlin and C#/Xamarin, with automated device and carrier detection and stall recovery, allowing migrations to run reliably and unattended at scale with minimal field support intervention.
- Uphold enterprise deployment policy through a structured, risk-managed rollout process that expands deployment scope in stages, advancing only once each group demonstrates stability.
- Function as de facto technical lead for a 2-person analyst team, mentoring and training on deployment sequencing, troubleshooting, and internal migration tooling, and serving as the team's technical escalation point during project and stakeholder calls.

Systems Programming Analyst — UPS, Mahwah, NJ

09/2022 – 06/2024

- Administered the Workspace ONE UEM environment supporting eight concurrent operational teams (BASSETFS, CAIR, CORA, GTSNGS, DOST, GNS WLAN, Premier, CHCS), ensuring endpoint security and availability.
- Served as primary and backup implementation lead across concurrent projects, deploying internal and third-party applications to improve operational performance.
- Partnered with System Engineering and business operations teams to align technical delivery with project timelines and requirements.

Telecommunications Technician — UPS, Mahwah, NJ

07/2021 – 08/2022

- Managed Machine-to-Machine server infrastructure end-to-end, including provisioning, vulnerability troubleshooting, and decommissioning.
- Audited, reconciled, and processed telecom cellular billing; escalated and resolved cellular and infrastructure issues with carrier vendors.

Help Desk Analyst — Kean University, Union, NJ

09/2019 – 06/2021

- Administered servers and user accounts across three campuses (Union NJ, Ocean NJ, Wenzhou China), including account security countermeasures to protect network assets and private data.
- Configured, trained staff on, and deployed IT helpdesk platforms including Freshservice ITSM, Freshcaller, BeyondTrust Remote Support, and Pulse Secure.

PROJECT HIGHLIGHTS

- **Mobile Mechanics Critical Outage Response:**

Acted as primary case manager coordinating a multi-vendor resolution (Apple, Zscaler, Omnisia) for a near-total operations stoppage affecting Airline Mechanic iPads, restoring service through an expedited iOS deployment and automated hourly status reporting.

- **Migration Tooling Development:**

Designed and built two generations of internal migration applications, an initial Kotlin and C#/Xamarin tool handling OS version and carrier-based device migrations, followed by a more advanced Android application automating enrollment from legacy MDM to Workspace ONE, incorporating retry logic, stall detection, and safeguards against duplicate device registration to minimize field failures.

- **iOS Device OS Update Compliance Initiative:**

Created and implemented UPS's enterprise standard for iOS update compliance, including automated workflows, compliance policies, in-device messaging, and automated monthly reporting distributed to business partners and the information security team.

EDUCATION & CERTIFICATIONS

- Bachelor of Science in Information Technology — Kean University, Union, NJ (2021)
- Apple Certified IT Professional — Exp. 08/2027
- Microsoft Azure AI Fundamentals
- Microsoft 365 Fundamentals
- AWS Certified Cloud Practitioner — Earned 2021 (not renewed; exp. 01/2024)
- CompTIA A+ — Earned 2020 (not renewed; exp. 07/2022)
